

What's New in Version 1.6?

In no particular order:

- an aircraft editor to manage all aircraft AI-related parameters and which will display a thumbnail of the selected aircraft if available,
- auto updates
- improved performance with long files
- less sensitivity to Windows regional settings
- user interface enhancements, including revised menu structure, simplification of the main window, a “smart” tree-view display which differentiates between files/folders of interest and those that are not, and context menus for each of the major lists
- the ability to edit weekly flight plans on multiple days irrespective of whether or not in the consolidate mode
- enhanced sub-setting for easy manipulation/partitioning of the default traffic files
- replacement of individual custom airport lists with a customizable main airport list

and, the local time to UTC conversions now work as intended.
