Blue Sky Environment Upgrade

Info

Thank you for downloading "Blue Sky Environment Upgrade." This download contains dawn, morning, day, noon, and dusk sky textures. These textures have been designed for detail and performance. I highly doubt your FPS will drop with Blue Sky. The textures will significantly help blend the horizon for a much more realistic look. They work great with Flight Environment as well as with just the default textures.

Install

To install, simply run the file called "Install Blue Sky." If you are using Flight Environment install them as mentioned above; however, if you do any changes through the configuartor, you must re-run the "Blue Sky installer" to overwrite FE sky textures. Anytime your Blue Sky textures get overwritten, run the Blue Sky Installer.

Un- Install

To un-install simply run the file called "Uninstall Blue Sky." This file overwrites Blue Sky's textures with the default ones. To un-install Blue Sky for Flight Environment, simply run the uninstaller, and then choose your sky options in the FE configuartor, then save/install them.

Support

For any questions or comments, feel free to E-mail me at alexranc@gmail.com or post it on the AVSIM forums.

Enjoy!
