A FORGOTTEN ISLAND DeLuxe.....
FSX SCENERY AND FLIGHT...

by Gera Godoy Canova

Auckland Island is the main island of the Auckland Islands, an uninhabited archipelago in the south Pacific Ocean belonging to New Zealand. It is inscribed in the UNESCO World Heritage list together with the other subantarctic New Zealand islands in the region as follows: 877-004 Auckland Isls, New Zealand S50.29 E165.52 62560Ha 1998

The island has an approximate land area of 510 square kilometres (200 sq mi), and is 42 kilometres (26 mi) long. It is notable for its steep cliffs and rugged terrain, which rises to over 600 m (1,969 ft). Prominent peaks include Cavern Peak (650 m/2,133 ft), Mount Raynal (635 m/2,083 ft), Mount D'Urville (630 m/2,067 ft), Mount Easton (610 m/2,001 ft), and the Tower of Babel (550 m/1,804 ft).

The southern end of the island broadens to a width of 26 km (16 mi). Here, a narrow

channel known as Carnley Harbour (on some maps the Adams Straits) separates the main island from the smaller Adams Island . The channel is the remains of the crater of an extinct volcano,

Adams Island is part of Auckland Islands archipelago. The southern end of Auckland Island broadens to a width of 26 km (16 mi) where a narrow channel, known as Carnley Harbour or the Adams Straits, separates it from the roughly triangular Adams Island (area approximately 100 km2/39 sq mi), which is even more mountainous, reaching a height of 705 m (2,313 ft) at Mount Dick[1]. **The channel is the remnant of the crater of an extinct volcano, with Adams Island, and the southern part of Auckland Island forming the crater rim.**

South Islands Air Service, flying Embraer 120´s has a Monday and Friday Flight to Adams Island recently started airfield, which is still only a dirt strip from INVERCARGILL, NZ.....

Fly to this Forgotten Island and check the area.....many changes will be coming there in the future. Use the enclosed Map.....
