

FS Timer Version 1.7

Introduction:

Fs Timer is a freeware timer program for use with all kinds of flight simulators. It is very small, simple and easy to use program. Actually I don't like timer built into FS, I never understood the timer inside FS so I decide to design one for my personal use. It is customizable timer for different simulation rate and has two timers with different setting and different functionality and you may use it not only for Fs. There is no connection between this timer and FS via for example FSUIPC and other modules so it works completely Independent. I found it very useful in my flights and I decided to share it with you. I hope you find it useful too!

Languages:

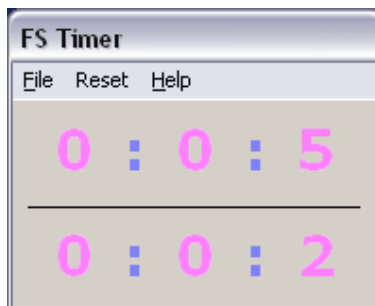

Fs Timer V1.7 presented in two languages, English and Persian (Farsi). You can change it from File menu. Please note that in order to see Farsi characters correctly you need to have an operation system with Farsi support capability like winXP.

Installation:

I suggest creating a folder in FS Main folder called FST and put the program into this folder. But anyhow you can put the program everywhere you like!

Second Timer:

In order to activate Second Timer select file>Second Timer>Start or press F2 and to stop the second timer press F3

Credit & Copyright:

FS Timer is a Freeware program. Commercial use in commercial programs is prohibited. Design & programming by Touradg Morassaei. For any problem or suggestion:
