

# Metz X- Freeware Scenery by *The Airport Guys*

<http://www.theairportguys.com>

Thank you for downloading Metz X by The Airport Guys. We hope that you enjoy our product and will come back for more!

## **Scenery Information:**

Metz X is a comprehensive scenery package for Metz airport (3CA7) in the Monterrey region of California. We have made and placed custom made models with hand-drawn textures inside Flight Simulator, giving you the most realistic version of Metz airport available for FSX today. We also have included a satellite ground image that aligns perfectly with the models, making this scenery very life-like. Due to the inaccurate placement of the airport in the default FSX, we have moved the runway to its correct spot. Accordingly, we modified the terrain mesh for the approach end of runway 33 so that the hill that juts out isn't as obtrusive and is more like as it is in the real world.

## **Installation:**

To install this scenery, simply run the installer that is included. IMPORTANT: You MUST activate the scenery within the scenery library for it to work.

## **More About *The Airport Guys*:**

The Airport Guys is a scenery design group that was formed by the merger of Borderline Flight Sim and fsCarolina. Both developers have increased their abilities by leaps and bounds in the past few months, which lead to the merge.
