

# **FDSCConnection v1.1**

## **for Microsoft Flight Simulator 2004**

By Michael De Feyter - Flight Deck Software  
<http://www.flightdecksoftware.com>

### **Introduction**

FDSCConnection is a module that gets loaded by MSFS (Microsoft Flight Simulator) and allows external programs to access the MSFS memory. FDSCConnection also re-maps and/or re-formats part of the MSFS memory to make it look like MSFS98 memory.

### **Configuration/Installation**

Just copy the FDSCConnection.dll in the MSFS modules directory. That's it!

### **Version History**

November 2003 – Version 1.1

- Added support for a lot of variables above the 0x3000 range
- Some issues with writing values where solved

October 2003 - Version 1.0

September 2003 Version 0.9 (Preview version)

### **License & Distribution**

FDSCConnection, is copyright © 2003 by Flight Deck Software. FDSCConnection is distributed as Freeware. Use this program at your own risk. The author accepts no liability for damage (real or imagined) caused to your computer while using this program.

### **Support**
