

**read me**

now it starts as always, I can't find a usable freeware airport in this case for the VTSP - Phuket Thailand so I'll build it myself again .....

now what can I say after a lot of work it is built as real as possible with many details with the standard scenery .....

So fly to Phuket. Currently there are flights from Bangkok with Bangkok Airways, but there are also some direct flights from Qatar via Munich and Doha with the Dreamliner

**Installation:**

Copy the folder VTSP -Phuket into the addon folder of the FSX, start the FSX, go to settings, change the scenery library, add the area, press OK, then you can start ....

**Extras:**

in order to be able to see people I deliver the file 3DPeople\_Lib with this you can also copy into the addon folder and activate it in FSX as described during the installation and you will see people .....

the same applies to extra vehicles with the supplied file ObjLib-Large-Car-Parking-FSX and you can already see more vehicles .....

**! You don't need these extras if you already have them!**

**Extra candy:**

the program Airport AI Enhancer so that you can create your own AI traffic .....
