

## INFORMAL AIRPORT ICAO LISTING

The NRST - Nearest airport and AILA - Airborne Instrument Landing Approach unit provides , navigation , approach and a synthetic ILS for any of the airports that are in the flight simulator database .

Pages 1 to 3 relate to any of the 24,000 airports that are in that database .

At Page 1 of that instrument the operator is presented with two options ,

- \* Page 1 - select an airport from the list of 16 nearest airports ,*
- or,*
- enter any airport ICAO into the search facility.*

**Opt. 1.** Any of the 16 Nearest airports listed can be selected by clicking on the beginning of desired line , the selected airport will be indicated at the bottom of the display.

or ,

**Opt. 2.** Should the pilot require an airport that is not shown on the display he can call up any airport worldwide by clicking the top right ICAO button , then typing any airport ICAO on the keyboard , the required airport will then be displayed .

As can be seen , with the second Option you need to know the "Airport ICAO" to be able to type it on the keyboard.

While some can be remembered , it will always be only a few , definitely not enough to provide global coverage .

In both Pages 1 and 2 of the unit selections can be made for a variety of reasons . They can be used to meet current landing needs , or just out of curiosity to see where an airport is , how far and in what direction , or to look at it's runway structure . It's use is totally up to the user .

The following 5 sheets are from a "Clipboard" instrument that was created several years ago , it provides a limited range of ICAO's that might be of use.

It is recommended that each user writes their own list of airport ICAO's on a sheet of paper or in a book . These airports could be their regular favourites or those that might be of interest or needed for a flight to be undertaken.

The list should detail - Country - State - Airport ICAO and name , the list would eventually build up over time to be an inventory of airports that are of use to the particular user.
