The places are made with ADE, standard and EZH-objects. They are designed especially for use with VFR Germany from Aerosoft. But they works also without VFR Germany. In P3D not all objects are displayed.

All airfields do have no ICAO-Code. Due to the fact that FSX requires a code every airfield has a fictive code. If there is a conflict with other airfields, the code has to be changed. In this case contact me.

Installation:

1. Unzip the file "German_UL-Airfields_4". Copy the enclosed folder "German_UL-Airfields_4" to a place of your choise and register is in scenery.cfg.

2. Copy the enclosed folder "EZ-Hangers" to a place of your choise and register is in scenery.cfg. If the EZ-Hangers library already installed, this step is not required.

3. If "German Landmarks" with additional airfields is used, my scenery must have a higher priority than "German Landmarks" to overwrite the GL airfields. If you would like to see a GL-airfield instead of mine, delete or move the respective bgl-files of my scenery.

Enjoy
