

FOKKER 100

CHECKLISTS

INTRODUCTION

This chapter contains the expanded normal checklists.

The expanded normal checklists contains all main and sub checklist items. The sub items are denoted by a - must be committed to a memory.

Items denoted by an asterisk are dependent on customer specification.

Before the first flight of the day, and after a crew change the flight deck should be scanned using the panel scan flow.

The checklist is used to verify that all steps of the preceding procedure have been accomplished. It is assumed that all systems are operating normally and that automated features are fully utilized.

Exterior and interior lights that have no obvious procedural requirements and personal comfort items are not included in the checklist.

CHECKLIST USAGE

Reading the checklist is done according to the challenge-and-response method. When the aircraft is parked the Pilot Not flying (PNF) shall read and the Pilot Flying (PF) shall respond to the challenge. When the aircraft is off blocks, the PNF shall read and complete the relevant checklist.

Reading and response shall always be done aloud, regardless of which crew member completes the action. if, under conditions of high workload, response to a checklist item cannot be given

The aircraft preparation consist of the EXTERIOR INSPECTION, the FLIGHT DECK SAFETY INSPECTION and the FLIGHT DECK PREPARATION. These three items should be performed before all originating flights and/or after a crew change. Items which can be checked simultaneously by left and right pilot are denoted "L-R". A broken line in a checklist procedure indicates a sequential condition which should be met before continuing with the procedure.

The BEFORE TAKE-OFF CHECK shall be performed when the aircraft is clear of the ramp.

The AFTER TAKE-OFF CHECK should be delayed until clear of the traffic area. An altitude of 5000 ft AGL is recommended.

The BEFORE LANDING CHECK should be accomplished after selection of landing flap.

EXTERIOR INSPECTION

The exterior inspection may be omitted if qualified maintenance personnel have carried out this inspection.

Prior to each flight, the flight crew or maintenance shall verify that the aircraft condition is acceptable for flight. Check that all flights controls are unobstructed and that all surfaces are clear of ice, snow, and frost. Check access panels properly secured, all vents and ports unobstructed and aircraft free from damage and fluid leakage. Check wheel chocks in place, gear

<p>immediately, the word "stand-by" shall be used and further reading of the checklist shall be suspended until the proper response is given. When a checklist is completed the pilot reading shall announce: "..... checklist completed".</p>	<p>pins removed and gear doors closed. Check tire condition and gear strut compression. Check shimmy dampers properly serviced.</p>
--	---

<p align="center">FLIGHT DECK SAFETY INSPECTION</p>	
<p>CIRCUIT BREAKERS.....</p>	<p>CHECKED</p>
<p>- Check all C/B's are in or collared in compliance with dispatch requirements</p>	
<p>BATTERIES.....</p>	<p>ON</p>
<p>-Select BATTERIES switch ON.</p>	
<p>-Check BAT voltage 24 V min.</p>	
<p>-Check SAP indicating.</p>	
<p>-Check EFIS EMER COOL FAL light on.</p>	
<p>LANDING GEAR.....</p>	<p>DOWN</p>
<p>-Check landing gear selector down, 3 green lights on.</p>	
<p>-Check alternate landing gear handle down.</p>	
<p>APU.....</p>	<p>ON</p>
<p>-Check DISCH switch guard closed, wired.</p>	
<p>-Check AGENT LO light(s) out.</p>	
<p>-Check LOOP A and B lights out.</p>	
<p>-Pull and rotate APU selector to START and release to ON.</p>	
<p>IRS.....</p>	<p>NAV</p>
<p>-Check AC power available.</p>	
<p>-Set mode selectors at IRS MSU to NAV</p>	
<p>FLAP SELECTOR.....</p>	<p>UP</p>
<p>FUEL LEVERS.....</p>	<p>SHUT</p>
<p>RADAR.....</p>	<p>OFF</p>
<p>EMERGENCY EQUIPMENT.....</p>	<p>CHECKED</p>
<p>-Check: Life vests</p>	
<p> Smoke goggles</p>	
<p> Flashlights</p>	
<p> Fire extinguisher</p>	
<p> Smoke hood</p>	
<p>-Check: Oxygen bottle open and pressure min 1450 psi for</p>	
<p> 3 crew or 1000 psi for 2 crew.</p>	
<p>AIRCRAFT DOCUMENTS.....</p>	<p>CHECKED</p>
<p>-Check all required documents on board.</p>	
<p>-Verify inoperative items in maintenance status comply with</p>	
<p>dispatch requirements.</p>	

-Select MFDS DU's ON. Recall and verify MFDS alerts comply with dispatch requirements. Correct or cancel alerts.

FLIGHT DECK PREPARATION

SIDE PANELS

L-R OXYGEN MASKS.....CHECKED

- On audio panel select OPEN IC, adjust INT volume and select SPKR ON.
- Push and hold RESET/TEST slide control down and check blinker momentarily yellow and oxygen flow audible via the speakers.
- Squeeze red release levers to inflate harness and check blinker momentarily yellow. Release levers.
- Press to test the EMERGENCY flow selector and check blinker momentarily yellow and oxygen flow audible via the speakers.
- Release RESET/TEST slide control.
- Check N/100 per cent lever at 100 per cent.

OVERHEAD PANEL

HYDRAULIC.....CHECKED

- Check system quantities minimum 70 per cent.

AVIONICS.....CHECKED

- Check GPWS FLAP OVRD switch guard closed

ELECTRIC.....CHECKED

- If EXT PWR on, select EXT PWR off (AVAIL light on) and have EXT PWR disconnected.
- Set display selectors to GEN and LOAD.

ENGINE FIRE CONTROL.....CHECKED

- Check fire handles in and latched.

TEST PANEL

- APU FIRE TEST (not required for a/c with double loop system)

- Depress APU FIRE button and check:
Repetitive triple chime, master WARNING and APU FIRE light on, FIRE APU message at MFDS.

- A-SKID TEST

-Depress A-SKID button and check A-SKID test light on.	
-Release button and check light extinguishes.	
-WARN SYS TEST	
-Depress and release WARN SYS button and check: TEST light on, WARN SYS IN TEST memo at MFDS, CMPL light on after approx 20 sec.	
PRESSURIZATION.....	CHECKED
-Check RATE control on mark.	
-Set manual rate control to DECR.	
-Check UP/DN toggle in mid position.	
FUEL.....	CHECKED
-Check all fuel pumps OFF.	
-Check AUTO FEED normal.	
-Check SYS SHUTOFF indicators in line.	
-Check X-FEED normal.	
EMER LIGHT.....	ARMED
AIR CONDITIONING.....	CHECKED
-Set temp selectors as required	
-Set ECON as required	
-Select cabin recirculation fans OFF if OAT is above +15 deg C / +59 deg F.	

MAIN INSTRUMENT PANELS	
L-R SOURCE SELECT SWS.....	CHECKED
-Check all source select switches as required.	
L-R CLOCKS.....	CHECKED
-Check time and date, adjust if required.	
STANDBY INSTRUMENTS AND RMI's.....	CHECKED
-Check for correct indication and absence of flags.	
-Erect standby horizon if necessary	
-Set standby altimeter(s) to 1013.2 / 29.92	

BEFORE STARTING CHECK	
Perform this check before each flight.	
SEAT BELT - NO SMKG.....	ON - AUTO
FLIGHT DATA RECORDER.....	ON
-Select FDR/CVR GND CTL p/b on AVIONICS panel ON.	
LANDING ALTITUDE.....	SET
-Set destination field elevation.	
FUEL QUANTITY.....	CHECKED
-Check total fuel quantity corresponds with flight plan fuel and cross-check with individual tank quantities.	

L-R EFIS.....SET

- Select PFD/ND on and adjust brightness.
- Check for correct display and absence of failure flags.
- Cross-check heading info with stby compass.
- Select required ND mode and MAP range
- Select DH and M/DA to zero.
- Select ALTM to QNH.

ALTIMETERS.....SET

- If required, altimeter accuracy can be checked as follows:
Set QNH at ASP and verify QNH at EFIS.
With current altimeter setting at ASP and standby altimeter(s), the altitude indication should show published field elevation within the following tolerances:

FIELD ELEV vs ALTITUDE IND TOLERANCES

FIELD ELEV FT ASL	ALT IND AT PILOT's PFD's	STBY ALTIMETER(S)
-1000 / +8000	-45 / +45	-35 / +80

NOTE: Allowances should be made for difference in elevation of ramp or point where check is made

SHIP'S PAPERS.....ON BOARD

- Check all company documents are available.

FMP.....SET

- Select FD on.
- Check bank control as required.
- Select V1.
- Select V2, departure speed, and initial departure altitude.

L-R FMS.....SET

- Select INIT page A
Write/insert CO RTE/FLT or FROM/TO.
Verify LAT/LONG and ALIGN IRS or INITIALIZE A/C POSITION (AHRS).
Write/insert COST IDEX and CRZ FL.
- Select INIT page B.
Write/insert ALTN fuel, BLOCK fuel, TOGW or ZFW and CG.
- Select F-PLN page.
Select TO runway/SID.
Verify proper flight plan routing.
Select SEC F-PLN and ACTIVE.
- Select TO/APPR page.
Write/insert V1.

Verify TO speeds, RWY, THR RED and ACCEL ALT.

-PF remains at TO/APPR page.

PNF selects DIR-TO page

MFDS/TRP.....SET

-Adjust brightness.

-Check left MFDS displays primary engine parameters and memos

-Check right MFDS displays secondary engine parameters and door status.

-For FLX thrust: Determine the assumed temperature from the TL table for the particular TO flap/runway combination.

Select FLX and set the assumed temperature.

Verify MFDS displayed FLX EPR value for the assumed temperature corresponds with EPR setting table value.

-For TOGA thrust: Determine take-off EPR from EPR setting table. Select TOGA and verify MFDS displayed take-off EPR value corresponds with EPR setting table value.

NAV/COM.....SET

-Set navigation, communication equipment, radar and transponder as required for departure.

NOTE

To prevent high workload in case MAP display is lost the following procedure is recommended before take-off and approach:

-Select ND to ARC or ROSE.

-Preset VOR/DME frequency and radial as required for SID or STAR.

-Select ND to MAP.

If MAP display is lost:

-Select ND ARC or ROSE.

PARKING BRAKE.....SET

-Check alternate brake pressure indicator.

If press below 1000 psi select HYDRAULIC SYS 1

ELEC PUMP ON until pressure is sufficient.

L-R WINDOWS AND DOORS.....CLOSED

-Check windows closed/markings in line.

-Check absence of doors status at MFDS.

GEAR PINS.....ON BOARD

-----CLEARED FOR START-----

ENG ANTI-ICING.....CHECK OFF

BEACON.....ON

ENGINE PANEL.....SET

-Use CONT 1 for odd numbered flights and CONT 2 for even numbered flights.
 -For aircraft not equipped with the auto ignition system use NORM.
 FUEL PUMPS.....ON
 -Select all fuel pumps (6) on.
 NOTE: For a/c equipped with CTR TANK p/b's with a blue ON legend, the CTR TANK pumps should only be switched on if the center tank contains fuel.
 WINDOWS AND PROBE HEAT.....ON
 -Select WINDOW HEAT on.
 -Select PITOT and VANE heating on.
 BLEED PRESS.....CHECK
 -Check bleed pressure approx 25 psi.
 THRUST LEVERS.....FWD IDLE
 -----START ENGINES-----

AFTER STARTING CHECK

ANTI-ICING.....SET
 -Select ENG anti-icing ON after second engine has been started when OAT below +5 deg C and visible moisture is present or runway is wet.
 ENGINE PANEL.....CHECKED
 -Select START p/b off.
 -Set IGNITION to NORM.
 NOTE: For a/c not equipped with the auto ignition system, select AUTO when the TO runway is wet.
 ALERT LIGHTS.....OUT
 -Scan overhead panel and main instrument panel and check all amber and white lights out.
 FLAPS.....SET FOR TO
 FUEL LEVERS.....CHECKED OPEN
 TRIMS.....SET
 -Set stabilizer to TO CG.
 -Check RUD and AIL approx zero.
 DOOR SELECTORS.....AUTOMATIC
 -Instruct cabin crew to set the door selectors to AUTOMATIC when commencing push-back, pull-out or taxiing.

BEFORE TAKE-OFF CHECK

FLIGHT INSTRUMENTS.....CHECKED

-Check PFD, ND, RMI and standby instruments for correct indications.

FMP.....SET

-Arm ATS.

-Select NAV/PROF as required

ABS.....RTO

BRAKE TEMPERATURES.....CHECKED

-Check brake temperature within limits.

TO DATA and BRIEFING.....COMPLETED

-Verify TO speeds.

-Perform TO briefing.

FLIGHT CONTROLS.....CHECKED

-Select FLT CTL LOCK OFF and check control lock lever securely latched in the lock off position.

-Check aileron and elevator for full and free movement.

-Hold tiller firmly and check rudder for full and free movement.

RADAR AND TRANSPONDER.....AS REQD

LIFT DUMPERS.....ARMED

-Depress LIFTD arm push button and verify blue ARM light on.

-----CLEARED FOR TAKE-OFF-----

APU.....AS REQD

-If flight time is less than 30 min the APU may be kept running

TO CONFIG.....CHECKED

-Push TO CONFIG button, check absence of take-off configuration warning, and check MFDS memo TO CONF NORM displayed

AFTER TAKE-OFF CHECK

MFDS.....CHECKED

-Check MFDS memos and switch off unnecessary equipment.

ALTIMETERS.....SET

-Select STD on EFIS panel when passing transition altitude.

BEFORE APPROACH CHECK

SEAT BELT.....	ON
LANDING ALT.....	CHECKED
-Check destination field elevation set.	
IGNITION.....	AS REQD
-Set IGNITION to NORM.	
NOTE: For a/c equipped with the auto ignition system, select AUTO when the landing runway is wet.	
ABS.....	AS REQD
MFDS.....	CHECKED
-Check MFDS for status information and recall in case of MESSAGE CANCELED displayed at MFDS.	
ALTIMETERS.....	SET
-Preset altimeter setting on ASP.	
-When passing transition level, select QNH on EFIS panel.	
-Cross-check altitude indications.	
Landing DATA/APPROACH BRIEFING.....	COMPLETED
-Perform approach briefing and set minimums if required.	
-Select ILS frequency/localizer course, VOR frequency/radials and ADF's as required.	
-Select FMS TO/APPR page and check estimated landing weight and Vapp for the intended flap setting. In case of an FMS approach insert MDA and confirm the FINAL APPR prompt.	

BEFORE LANDING CHECK	
LANDING GEAR.....	DOWN
-Check 3 green landing gear lights on.	
FLAPS.....	SET
LIFT DUMPERS.....	ARMED
-Depress lift dumpers ARM push button and check blue ARM light on.	
NOTE	
For adequate cabin cooling in hot climates, start APU before landing.	

AFTER PARKING CHECK	
PARKING BRAKE.....	AS REQD
-Release parking brake when wheel chocks are in place.	

DOOR SELECTORS.....MANUAL

-Instruct cabin crew to set the door selectors to MANUAL when taxiing into the gate/parking stand.

APU.....AVAILABLE

-Check APU available at AFDS.

-If APU not used or inoperative have external AC power connected before shutting down last engine.

SPEED BRAKE AND LIFT DUMPERS.....IN

-Check speed brake selector forward.

-If lift dumpers out MEMO present at MFDS.

-Check reverse handles fully down and depress

LIFTD arm p/b to retract lift dumpers.

FLAPS.....SET

NOTE

If approach or landing is made in icing conditions or if runways or taxiways are covered with slush, the flaps should not be raised beyond 25 deg until it is visually checked that flaps and flap vanes are clear of ice.

RADAR.....CHECK OFF

ANTI-ICING.....OFF

-Check engine, wing, and tail anti-icing systems off.

-Select WINDOW HEAT OFF.

-Select VANE and PITOT heat OFF.

FUEL LEVERS.....SHUT

FLIGHT CONTROLS.....LOCKED

-Select FLT CTL LOCK ON.

-Push control column forward until lock engages.

SEAT BELT.....OFF

EXTERIOR LIGHTS.....CHECK

-Select BEACON light off.

-Set NAV/LOGO and WING INSPEC lights as required.

-Retract taxi and landing lights.

FUEL PUMPS.....OFF

AIR CONDITIONING.....SET

-Set ECON as required.

-Select cabin recirculation fans OFF if OAT is above +15 deg C / +59 deg F.

EFIS.....OFF

-Select PFD and ND OFF.

MFDS.....CHECKED

-Check MFDS for memos and absence of alert messages

Select MFDS's OFF.

-----FINAL STOP-----

IRS.....OFF
 -Select mode selectors at IRS MSU to OFF.
 EMER LIGHT.....OFF
 APU.....OFF

NOTE
 Wait 10 sec before switching the batteries off to
 allow for APU door closure.

BATTERIES.....OFF

PERFORMANCE

Following tables present the take-off speeds as a function of aircraft weight.

Engine: R&R TAY 620-15

FLAP 0

AIRCRAFT WEIGHT (kg)	AIRSPEED (kt)		
	V1 = Vr	V2	Vfto
28 000	111	119	148
30 000	116	123	153
32 000	120	128	158
34 000	125	132	163
36 000	130	135	168
38 000	134	139	172
40 000	138	143	177
42 000	142	146	181
44 000	147	150	185

Engine Correction: For every 5 deg C above
 30 deg C OAT: V1 and Vr: + 1 kt

Engine: R&R TAY 620-15

FLAP 8

AIRCRAFT WEIGHT (kg)	AIRSPEED (kt)			
	V1 = Vr	V2	Vfr	Vfto

28 000	107	113	119	148
30 000	112	117	123	153
32 000	116	121	128	158
34 000	120	125	132	163
36 000	123	128	135	168
38 000	127	132	139	172
40 000	131	135	143	177
42 000	135	138	146	181
44 000	139	142	150	185

Engine Correction: For every 5 deg C above
30 deg C OAT: V1 and Vr: + 1 kt

Engine: R&R TAY 620-15

FLAP 15

AIRCRAFT WEIGHT (kg)	AIRSPEED (kt)			
	V1 = Vr	V2	Vfr	Vfto
28 000	104	110	119	148
30 000	109	114	123	153
32 000	113	118	128	158
34 000	117	121	132	163
36 000	121	125	135	168
38 000	125	128	139	172
40 000	129	131	143	177
42 000	132	134	146	181
44 000	136	138	150	185

Engine Correction: For every 5 deg C above
30 deg C OAT: V1 and Vr: + 1 kt

LANDING SPEEDS

Next table present the landing speed, Vref, as a function of aircraft weight and flap setting. The influence of temperature and slope are small and can be ignored. The following tables are valid for the conditions mentioned.

AIRCRAFT WEIGHT (kg)	Vref (kt)		
	FLAP 0	FLAP25	FLAP42
28 000	129	117	109
30 000	134	122	112
32 000	138	126	116
34 000	142	129	120
36 000	146	134	123
38 000	150	136	127
40 000	154	140	130
42 000	158	145	133

44 000	162	147	136
--------	-----	-----	-----

LANDING WEIGHT LIMITED BY RUNWAY LENGTH

Following tables presents the runway length as a function of aircraft weight for flap 42 and flap 25

ENGINE R&R TAY 620-15

AIRPORT ALTITUDE 0 ft

FLAP 42

AIRCRAFT WEIGHT (kg)	REQUIRED RUNWAY LENGTH (m)
28 000	1100
30 000	1155
32 000	1200
34 000	1255
36 000	1300
38 000	1360
39 900	1400
Corrections:	
per kt headwind	: - 8 m
per kt tailwind	: + 27 m
per 1000 ft above sea level	: + 35 m
Conditions: Dry runway All braking means serviceable	

ENGINE R&R TAY 620-15

AIRPORT ALTITUDE 0 ft

FLAP 25

AIRCRAFT WEIGHT (kg)	REQUIRED RUNWAY LENGTH (m)
28 000	1190
30 000	1240
32 000	1300
34 000	1355
36 000	1410
38 000	1470
39 900	1520
Corrections:	
per kt headwind	: - 9 m
per kt tailwind	: + 29 m

per 1000 ft above sea level : + 50 m
Conditions: Dry runway All braking means serviceable

Next table provides the advisory landing distance for landing on very slippery runways as a function of aircraft weight. The advisory landing distance is the unfactored distance from a point 50 feet above the landing surface to the complete stop. The influence of temperature and slope are small and can be ignored. The following tables are valid for the conditions mentioned.

ENGINE R&R TAY 620-15
AIRPORT ALTITUDE 0 ft
FLAP 42

AIRCRAFT WEIGHT (kg)	REQUIRED RUNWAY LENGTH (m)
28 000	1400
30 000	1480
32 000	1580
34 000	1680
36 000	1770
38 000	1870
39 900	1960
Corrections:	
per kt headwind	: - 20 m
per kt tailwind	: + 64 m
per 1000 ft above sea level	: + 60 m
Conditions: Vref Poor braking action Normal max reverse thrust selection	

FLIGHT PLANNING

CRUISE LEVEL SELECTION

Following table presents the cruise level to destination or alternate as a function of distance. The table is valid for the following speed schedule.

Climb	250 / 280 / M.70
Cruise	280 / M.70
Descent	M.70 / 280 / 250

TRIP DISTANCE (nm)	100	150	200	250	300	350
CRUISE LEVEL	100	200	250	290	330	350

Following table presents the maximum initial cruise level as a function of aircraft weight and temperature. The table is valid for a climb speed schedule of 250 / 280 / M.70. The table can also be used to determine the maximum obtainable flight level for step climb.

INITIAL CRUISE LEVEL

engine R&R TAY 620-15

Aircraft Weight (kg)	MAX INITIAL CRUISE LEVEL			
	ISA and below	ISA + 10 deg C	ISA + 15 deg C	ISA + 20 deg C
36.000	350	350	350	350
38.000	350	350	340	330
40.000	350	340	320	310
42.000	340	330	310	290
44.000	330	310	280	260

CLIMB

Following table is provided for a climb speed schedule of 250 / 280 / M.70 and for ISA (International Standard Atmosphere) temperature conditions. Climb distance, time, and fuel are presented from brake release to the top of climb.

CLIMB

ISA

SPEED 250 / 280 / M.70

FL	DISTANCE (nm) TIME (min) FUEL (kg)								
	TAKE-OFF WEIGHT (kg)								
	28.000	30.000	32.000	34.000	36.000	38.000	40.000	42.000	44.000

CRUISE

Cruise and long-range cruise information is given for ISA temperature conditions. Following table is provided for cruise 280 / M.70. Fuel flow per engine (FF/ENG) and TAS are shown as a function of aircraft weight and flight level (FL).

CRUISE		ISA						SPEED 280 / M.70

DESCENT

Following table presents descent distance, flight time, and fuel used from the top of descent to 2.000 ft including deceleration. The table is valid for an aircraft weight of 38.000 kg. The information is based on the following descent schedule:

-If the top of descent is above FL 300, descent to FL 300 with a constant rate of 1000 ft/min; at FL 300 idle thrust is selected.

-If the top of descent is below FL300, idle thrust is selected.

The speed schedule is M.70/280 down to FL 100.

-At FL 100, decelerate to 250 kt IAS and descend with idle thrust to a pressure altitude of 2000 ft.

-At 2000 ft decelerate to the green dot speed + 20 kt, which is the initial approach speed.

Corrections: Per 10 deg C above standard temperature, N1: + 1.5 per cent; FF/ENG + 2 per cent. Per 10 deg C below standard temperature, N1: - 1.5 per cent; FF/ENG: - 1.5 per cent. If holding is a racetrack pattern, fuel consumption: + 5 per cent.						

TRIP TIME AND FUEL DATA

Following tables provided trip time and fuel data from take-off till 2000 ft above destination for stage lengths from 100 nm up to 950 nm with intervals of 50 nm. First two tables are valid for a take-off weight of 38.000 kg, zero wind, and for ISA temperatures. Second two tables provide the same information for stage lengths from 1000 nm up to 2000 nm with intervals of 100 nm. These two tables are valid for a take-off weight of 44.450 kg. The information is based on airports of destination and departure at sea level and air conditioning in the normal mode.

The following speed schedule is applicable:

Climb : 250 / 280 / M.70
Cruise : 280 / M.70
Descent : M.70 / 280 / 250

The required block fuel is calculated as follows:

Taxi fuel: Normally 100 kg. For prolonged taxi times use 15 kg/min.

+

Trip fuel: Obtained from trip time and fuel table

+

Route reserve: According state and/or company rules; usually six per cent of the trip fuel.

+

Alternate fuel: Obtained from trip time and fuel table.

+

Holding fuel: According state and/or company rules; usually 45 min.

- NOTES: 1. For approach and landing add 175 kg and six minutes.
 2. For conditions above ISA increase the fuel with two per cent per 10 deg C above ISA.

MAXIMUM OPERATING WEIGHTS:

The maximum operating weights are:

Maximum Take-off Weight (MTOW)	44.450 kg (98.000 lb).
Maximum Landing Weight (MLW)	39.915 kg (88.000 lb)
Maximum Zero Fuel Weight (MZFW)	36.740 kg (81.000 lb)
Maximum Taxi Weight (MTW)	44.680 kg (99.500 lb)

FUEL

Tank Arrangements and Identifications

The fuel is stored in wing tanks which contain an integral collector tank, and a center tank.
