Admiral Kuznetsov/Liaoning
Tips on landing.

Approach the Carrier from nearly directly behind it. Approach with flaps down full and as slow as possible without stalling.

(tailhook down as well, of course)

Try to touchdown here.

Pushdown and apply brakes here.

If you haven't stopped by here release brakes and apply full throttle. Go around and try the approach again.
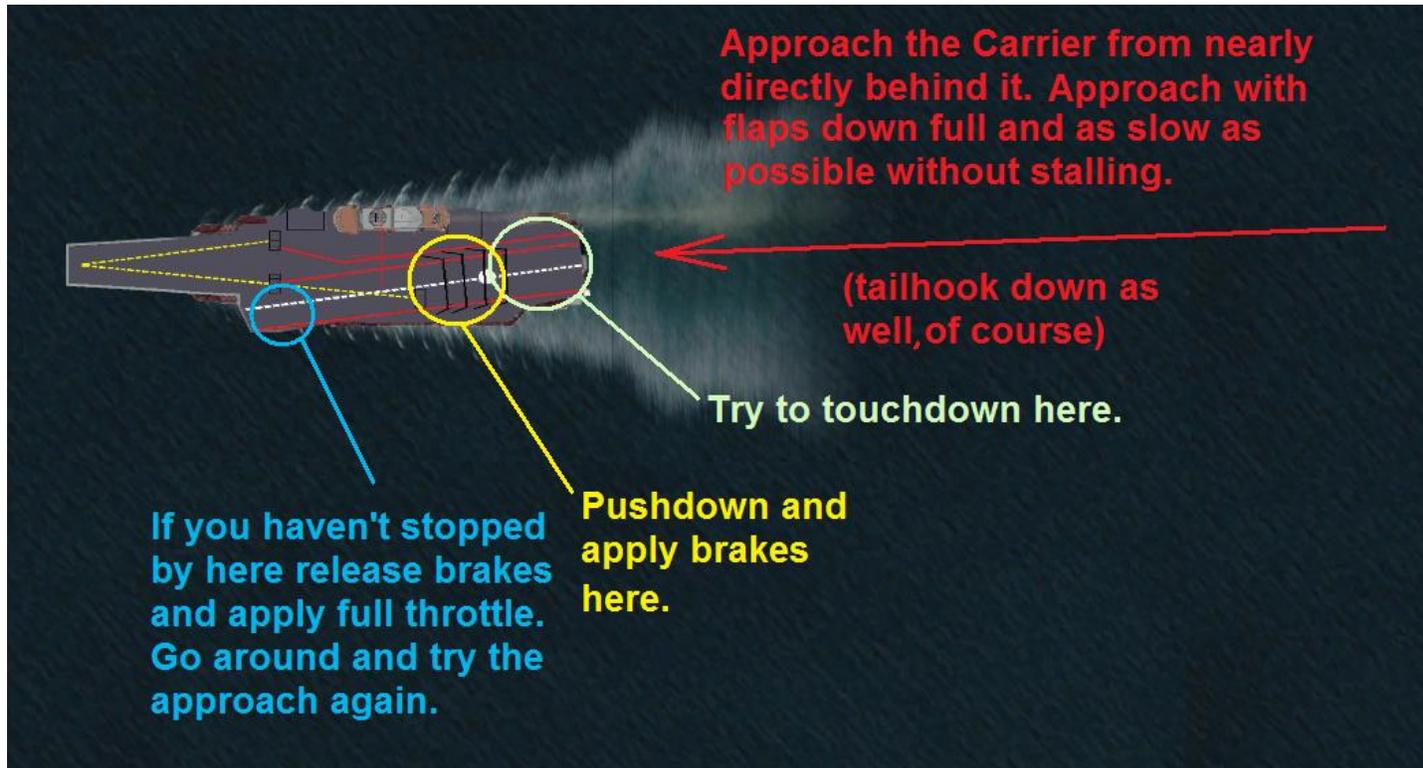

- Note landing on this carrier is not like landing on the default carriers. Wire traps are much harder, thus your landing speed must be very slow- almost on the verge of stalling.

Takeoffs Using the Skijump

1- Taxi to just ahead of one the black boxes on the flight deck and apply the parking brakes.

2- Apply full throttle.

3- Release the parking brakes. (the Su-33 in this package will do this automatically a few seconds after throttling up)

4- Zoom up the skijump and into the sky.
