

VNKT Kathmandu Airport Upgrade for FS9 only

I am presently working on a representation of Kathmandu in Nepal.. Use in conjunction with the RNA Military and various Nepal airlines packages (available on Avsim.com) to bring this lovely airport to life. In the above screen you can see the area In this package, namely the Military parking and Nepal Airlines maintenance area. You will need the maintenance platforms and M-Trees2 libraries, not included.

This is a work in progress, as well as the airport I hope to add some of the city scenery too, I am working on the main airport entrance gate, a fantastic piece of work, so keep a lookout for more updates, I hope you enjoy using this add-on

To Install, just place the VNKT folder in FS9/Add-on scenery and add to the library. I use Martin Domig's mesh for Nepal and the Holger mesh for the mountains so there should not be any elevation problems. If for some reason, the textures won't display, then add the .bmp files to the main FS9/texture folder.

If you are using Einar Arvik's great scenery for Nepal then you will need to remove the tribuvan scenery files. I loved using his Kathmandu scenery for years, I tried to get in touch with him to see if we could work this together as I thought his version captured the look and feel of Kathmandu.

Any problems, contact me on timothyuk@hotmail.com

Tim

Many thanks to
