

Shoreline Problems

Truk Atoll has some very nice shorelines . Installing them requires some changing of numbers and addition of lines in the terrain.cfg .

Flight Simulator X terrain is defined in the terrain.cfg file. Richard Ludowise and Luis Féliz-Tirado have determined a certain number of modifications to this file, will correct some problems with the FS world and also provide more options for scenery designers. The fix can be downloaded at Flightsim.com or Avsim.com. Just do a search for either of their names.

<<<<<<<<< First, back up your terrain.cfg! >>>>>>>>>>>>>>
